OBJECT ORIENTED PROGRAMMING

Kiel Maverick G. Sungayang BSIT 2-2N

PART A - VARIABLE IDENTIFICATION TABLE

Variable	Data type	Variable type	Stored In
school	String	static	Heap
name	String	instance	Heap
grade	Int	instance	Heap
gwa	double	local	Stack
s1	Student	Reference	Stack
s2	Student	Reference	Stack

PART B - EXPLANATION

Statement	What Happens?	Memory Impact
s1 = new student();	A new object is placed into the heap, and the pointer is given to s1	New object in Heap.
s2 = new student();	A new unique object is placed into the heap, and the pointer is given to s2.	New object in Heap.
s2 = s1	the pointer assigned to s1 is also copied to s2.	Previous object in s2 in heap is cleaned by garbage collector, so there is no way to access
s1 = null	Pointer of s1 is turned into null (points nowhere)	Memory remains the same.

Sign

Date:

school = "PUP sta. Mesa"	school variable is accessed locally inside student class, school variable changes.	school variable in heap, which class student, is changed for all objects.

PART C – OUTPUT

Mark 90 1.75 PUP – Sta mesa
